

CarterPCs — fix-v17

Navigation UX: honest destinations + compact mobile header

The six-label bar made six promises about four destinations, and below the desktop breakpoint its wrapped link rows held the fixed bar at ~197px on phones. Four honest labels now map one-per-section, and the mobile bar is a compact header whose section links live behind an accessible disclosure.

Baseline 1c5cb92 (fix-v16, committed by the owner) · 12 files changed
typecheck 0 · lint 0 · unit 43/43 · build pass · e2e 74/74 × 3 consecutive runs · git diff --check clean
Nothing committed, pushed, reset, cleaned or reverted. No report folder touched.

Issue 1 — misleading duplicate destinations

“Work” AND “Impact” both linked to #featured; “Content” AND “Universe” both linked to #content-universe. The two labels whose targets were duplicates are REMOVED, not renamed — every remaining label keeps exactly the destination it already had, one label per real section. No invented sections, no new names. The Footer renders the same four pairs from the same shared SECTION_HREFS list, so the two can never drift; a regression test asserts the exact label→href map and that no two section links share an anchor.

EN	FR	ES	Destination
Work	Projets	Proyectos	#featured
Systems	Systèmes	Sistemas	#hardware
Process	Processus	Proceso	#creator
Universe	Univers	Universo	#content-universe

Identity/utility controls besides the list: the wordmark → #hero and the “About Carter” pill → #creator. All five destinations remain navigable.

Issue 2 — oversized mobile navigation

Viewport	Before (fixed bar)	After
320×568	196.5px — three rows	124.5px — identity / utilities
390×844	197px	124.5px
430px	197px	86px EN/ES · 124.5px FR (single row from 470)
768×1024	128px — two rows	86px — one row
844×390 landscape	128px (33% of the viewport)	86px (22%)
≥1024 desktop	80px	80px — unchanged, full centre row

The compact header keeps identity + About Carter + theme + language + the sections trigger visible; the four destinations live behind the trigger. The menu is the SAME state-driven disclosure system as theme/language — one open-menu owner, Escape-with-focus-return, outside-press close, Arrow/Home/End movement, aria-haspopup/aria-expanded/aria-controls, translated names (Browse sections / Parcourir les sections / Explorar secciones). Items are 43px targets (min 24, preferred 44); the trigger is a 38px square matching the approved utility squares. Activating a link navigates and closes WITHOUT reclaiming focus — the browser owns focus placement on fragment navigation; Escape and outside-press still return focus to the trigger. Reduced motion: the menus are display-toggled — nothing can strand them half-hidden; asserted per-item at opacity 1.

Defect found during this pass's own QA

At 320px the non-wrapping utils row was ~334px in French (the pill ~160px + three 38px squares + 1.25rem gaps) against a 280px content box — the sections trigger sat OFF-SCREEN. Fixed below 540px: 0.5rem gaps, compact pill (0.8125rem type, 0.625rem padding), decorative arrow hidden (an aria-hidden span, not copy). The widest (French) row is now ~272px; re-measured 'ok' at 320–844 in all three languages, every control inside the bar's padding edge.

Anchors after the margin retune

Tiers 9rem / 6.5rem ≥600 / 6rem ≥1024 (bar 124.5 / 86 / 80px; the 600px boundary exists because French holds two rows through 599). All 96 measured landings — four sections × three languages × eight viewports including 844×390 — sit 15.6–19.9px below the bar (58px in the 470–599 EN/ES pre-boundary band: air, not overlap).

Contrast (srgb-aware measurement)

Element	Dark	Light	Requirement
Sections trigger icon	9.37:1	6.96:1	3:1 (non-text)
Menu item text	16.07:1	14.94:1	4.5:1

Validation

```
typecheck  tsc -b          0 errors
lint       eslint .        0 errors
unit       vitest          43/43 (42 + new destination-map test)
build      vite build      pass
e2e        playwright      74/74 run 1  (72 + 2 new; 2 rewritten)
                        74/74 run 2
                        74/74 run 3
diff       git diff --check clean
```

Test updates that the IA change forced (all test-side): the “Content” link test now clicks “Universe”; the mobile menu-overlap test re-anchored to the bar’s controls (its old premise — visible link rows — no longer exists); the 24px-target test re-targeted at the menu items; barGeometry filters hidden (zero-rect) controls; footer link counts 9/6 → 7/4. Two new e2e tests cover the full menu cycle and reduced-motion visibility; a new unit test pins the exact label→destination map with no duplicate anchors.

?? Claude report/fix-v17/

baseline: 1c5cb92 fix(nav): add scrolled-state scrim and frame Hardware
(fix-v16, committed by the owner mid-pass — this diff is pure fix-v17)
```

Nothing committed, pushed, reset, cleaned or reverted. Protected report folders untouched.

Verdict

Delivered. Each primary label now describes exactly one real destination in all three languages, mirrored by the Footer from one shared list; the phone bar drops from ~197px of fixed chrome to a 124.5px compact header (86px from ~470px up) with every destination one accessible disclosure away; anchors land clear at every measured width; the desktop bar and the scrim behaviour are untouched; and the whole chain is green three times over.
