

CarterPCs fix-v11 — Footer

Summary

The site's last row, attached after the Closing section. Nine links: the bar's six destinations and the three supplied social profiles, nothing else. Translated through the existing typed dictionary in all three languages, token-only so dark, light and system follow the palette, and measured across 12 viewports × 3 languages × 2 themes — 72 combinations, all clean.

Nothing above it moved: **all 30 before/after section captures are 0 changed pixels**, and the Closing section's own 72-combination sweep is unchanged. Its two source files are untouched in git; the only edit needed to attach the footer was one line in `App.tsx`.

One thing to decide, flagged below rather than silently resolved: **the sentence "Independent creative concept." now appears twice**, once in the Closing statement and again in the footer, because both blocks of copy were specified that way.

What was built

Element	Content
Destinations	Work · Systems · Process · Impact · Content · Universe (the bar's six)
Platforms	YouTube · Instagram · TikTok ↗
Ownership	© 2026 CarterPCs Portfolio Concept
Disclaimer	Independent creative concept. / No affiliation or endorsement implied.

Files added: `src/components/footer/Footer.tsx`, `src/components/footer/Footer.module.css`, `src/components/navigation/sections.ts`.

Composition

One hairline divider — the same motif every section boundary uses — then two compact rows on the shared 96rem canvas: destinations and platforms on the first, ownership and disclaimer on the second. Below 640px the four groups stack in source order, which is already the reading order.

It is quieter than the Closing section by measurement, not by intention:

	Footer	Closing
Height	150–274px	495–734px
Largest type	13px	up to 98px
Ink	muted token throughout	display white/black

Why the section list moved to its own file

The footer needed the same six hrefs the bar uses, and they were a private const inside `Nav.tsx`. Copying them would have created two lists that drift the moment a real Process or Impact section lands. They now live in `components/navigation/sections.ts`, imported by both — the labels already came from one place (`nav.sections`, in the same order), so this puts the targets on the same footing. `Nav.tsx` changes by an import and a rename; its markup and behaviour are identical.

Social links

Exactly the three destinations supplied, written as literals so there is no indirection between the source and what ships:

Platform	Destination
YouTube	<code>https://www.youtube.com/@actuallycarterpcs</code>
Instagram	<code>https://www.instagram.com/carterpcs_/?hl=en</code>
TikTok	<code>https://www.tiktok.com/@carterpcs?lang=en</code>

Each carries `target="_blank"` and `rel="noreferrer"` — verified on the rendered DOM in all 72 combinations, not just asserted in the source.

They are **typographic labels rather than brand marks**. The site bundles no third-party logo files anywhere — the Hero's Featured-In strip recreates its wordmarks with type for the same reason — and a text label is its own accessible name, so this was the option that matched the existing system.

The accessible name appends the new-tab warning **after** the platform name — `YouTube – opens in a new tab`, translated per language — so the visible label still starts the accessible name (WCAG 2.5.3 Label in Name) instead of being replaced by it.

No animation, on purpose

Every section above carries a one-shot scroll reveal. The footer has none: an entrance here would be noise rather than choreography, and "no animation" is also the strongest possible answer to the reduced-motion requirement — there is nothing to disable, and nothing that can strand an element at `opacity: 0`, which is precisely how the Closing section's back-to-top control broke in fix-v10. Measured under `prefers-reduced-motion: reduce: 0 elements carrying an inline style` (nothing animated them) and 0 below full opacity.

The only transition is the links' hover colour, which the global reduced-motion rule already collapses.

One thing for you to decide

"Independent creative concept." now appears twice. The Closing section says *Independent creative concept.* / *Not affiliated with CarterPCs.* and the footer says *Independent creative concept.* / *No affiliation or endorsement implied.* The two blocks sit about 200px apart at desktop, and the repeated first line is visible in screenshot 01.

Both were specified — Closing's in the previous task, the footer's in this one — so I built exactly what was asked rather than quietly editing one. It is worth a decision either way. The cheapest fixes, in order of how little they touch:

1. Drop the footer's `disclaimerLineOne` and keep only "No affiliation or endorsement implied." — a one-line change per language, and the footer already carries the concept framing via the copyright. 2. Drop the Closing section's disclaimer entirely and let the footer carry it. 3. Leave it: the repetition is legible as a deliberate legal restatement.

Say which and it is a few minutes' work. Nothing else in the footer duplicates copy from elsewhere.

Verification

12 viewports × 3 languages × 2 themes = 72 combinations, against a production build.

Check	Result
Page horizontal overflow	0 in all 72
Ink past the canvas padding box	0 in all 72
Link count	9 in all 72
Pairwise overlap between links	0 in all 72
External links missing <code>_blank</code> / <code>noreferrer</code>	0 in all 72
Text contrast failures (dark and light)	0 of 1080 samples
Tap targets under 24×24 (hit-tested)	0

Tap targets, measured the way a finger meets them by walking `elementFromPoint` outward from each link's centre:

Group	Smallest target	Samples
internal destination	32.4 × 34	432
external profile	54.3 × 35	216

The labels set a 16px line box; vertical padding takes the target to 32px. Unlike the bar's links there is no approved geometry to preserve here, so the target is simply the right size rather than being enlarged by an overlay.

Contrast, worst case across 1080 samples — 0 unparsed colours, verified before reporting (the blind spot corrected in fix-v10):

Element	Dark	Light	Needs
links	7.69:1	5.76:1	4.5
external arrow	7.69:1	5.76:1	4.5
copyright	7.69:1	5.76:1	4.5
disclaimer lines	7.69:1	5.76:1	4.5

320px through desktop. No overflow, no overlap, no clipping at any width. At 320px in French and Spanish the destinations wrap onto two rows and the platforms take their own — measured, still zero overlap. At 768px in French the same wrap happens beside the platform row and still fits.

Semantics. One `contentinfo` landmark, outside `<main>` and after it in document order. The footer's own `<nav>` carries a translated label (`Footer` / `Pied de page` / `Pie de página`) so it is distinguishable from the primary navigation, and the platform list carries `Social` / `Réseaux sociaux` / `Redes sociales` . Keyboard focus lands on every link in order with the global `:focus-visible` ring (screenshot 21).

Nothing invented. Audited on the rendered footer: 9 anchors exactly, 6 internal and 3 external; hosts are exactly `www.youtube.com` , `www.instagram.com` , `www.tiktok.com` ; no `button` / `form` / `input` ; no `mailto:` or `tel:` ; and the only digits in visible text are the copyright year.

Translations

Key	English	French	Spanish
<code>copyright</code>	CarterPCs Portfolio Concept	CarterPCs — Concept de portfolio	CarterPCs — Concepto de portafolio
<code>disclaimerLineOne</code>	Independent creative concept.	Concept créatif indépendant.	Concepto creativo independiente.
<code>disclaimerLineTwo</code>	No affiliation or endorsement implied.	Aucune affiliation ni approbation impliquée.	No implica afiliación ni respaldo.
<code>ally.footerNavigation</code>	Footer	Pied de page	Pie de página
<code>ally.socialLinks</code>	Social	Réseaux sociaux	Redes sociales
<code>ally.opensInNewTab</code>	opens in a new tab	ouvre dans un nouvel onglet	se abre en una pestaña nueva

Two notes:

- `copyright` **holds only the name.** The "©" and the year are language-neutral and are composed in `Footer.tsx` from a single constant, so updating the year is one edit rather than three. Each language follows its own `meta.title` wording.
- **The platform names are not translated.** They are proper nouns; they appear in the component as literals, and only the new-tab suffix is localised.

Nothing above it moved

Same captures, same pipeline, before and after — 30 section captures across 320×568 fr, 844×390 en, 768×1024 es, 1024×768 en, 1440×900 en light and 390×844 es light:

30 of 30 are 0 changed pixels. Total changed: 0.

The Closing section was also re-measured over its own 72 combinations and is unchanged — no overflow, no ink outside its canvas, no residual clip-path, 0 contrast failures. Its two files do not appear in `git status` . The only change made to attach the footer was one `<Footer />` line in `App.tsx` .

The fix-v9 site-wide sweep was re-run with the footer in place — 12 viewports × 3 languages × 6 anchors — and still reports no page overflow, no clipped text, and no residual clip-path anywhere.

Files changed

File	Change
src/components/footer/Footer.tsx	new — the footer
src/components/footer/Footer.module.css	new — its styles
src/components/navigation/sections.ts	new — the shared six destinations
src/components/navigation/Nav.tsx	imports the shared list instead of its own
src/app/App.tsx	renders <code><Footer /></code> after <code></main></code>
src/i18n/en.ts	footer block (shape source of truth)
src/i18n/fr.ts	French footer block
src/i18n/es.ts	Spanish footer block
src/app/App.test.tsx	3 new tests, 4 updated
e2e/app.spec.ts	8 new tests, 6 updated

Tests

Unit: 29 → 32. The footer renders after `main` as a `contentinfo` landmark whose six destinations match the bar's hrefs label-for-label (read from the same shared list); exactly the three supplied social destinations with `target / rel` and an accessible name that starts with the visible platform name; and an "invents nothing" audit — 9 anchors, 6 internal, the three expected hosts, no form controls, no `mailto: / tel:`, and `2026` as the only figure.

E2E: 46 → 54. Per language: the footer follows `#closing`, sits outside `main`, renders six labelled destinations and the three profiles with correct `href / target / rel / accessible name`, and shows the copyright and both disclaimer lines in that language. Plus a whole-footer link audit; a mobile test at 320px and 390px in all three languages asserting no copy outside the canvas, no overlapping links, a 24px minimum target and no overflow; light-theme AA contrast; and the reduced-motion state.

Ten existing tests were updated rather than worked around. The six section labels now appear twice on the page, so queries like `getByRole('link', { name: /^work$/i })` became ambiguous. They are now scoped to the primary navigation landmark, which is a stronger assertion than the bare name was. Two DOM selectors (`nav ul a`) that would have silently swept in the footer's row now exclude it explicitly, and the Creator section's platform-line assertions are scoped to `#creator` because "TikTok" is now also a footer destination. One Closing assertion is scoped to `#closing` for the duplicated disclaimer sentence discussed above.

Validation

Check	Result
<code>npm run typecheck</code>	PASS
<code>npm run lint</code>	PASS
<code>npm run test:run</code>	PASS — 32/32 (was 29)
<code>npm run build</code>	PASS
<code>npm run test:e2e</code>	PASS — 54/54 (was 46)
<code>git diff --check</code>	PASS (exit 0; CRLF advisories only)
<code>npm run format:check</code>	FAIL — 3 pre-existing files, see below

`format:check` reports `Claude report/fix-v1/report.md`, `fix-v2/report.md` and `fix-v3/report.md` — prior fix folders this task does not touch. Every file created or edited this pass is prettier-clean.

One disclosure on the e2e run: the first full pass showed two failures. One was real — a tap-target test that swept in the footer's links — and is fixed. The other, a Hardware scroll test, timed out under parallel load and passed on its own and on every rerun; it is a flake, not a regression, and I would rather name it than quietly rerun until green.

Git

No commit, push, reset, clean, or revert. `HEAD` is still `685f7b9`. No prior `Claude report/fix-v*` folder was modified, and all pre-existing uncommitted work is intact.

Screenshots

`screenshots/` holds 12 captures.

- 01 — the Closing → Footer boundary at 1440×900, showing the hierarchy: loud statement, hairline, quiet row. Also where the duplicated disclaimer sentence is visible.
- 10 – 18 — the footer at 1536×1024 dark, 1440×900 light, 1024×768 fr, 768×1024 fr (destinations wrapping), 844×390 es, 390×844 fr dark and es light, and 320×568 es dark and fr light.
- 20 — the reduced-motion resting state.
- 21 — the focus ring on a social link.

Verdict

READY FOR REVIEW, with one content decision outstanding: whether the repeated "Independent creative concept." line should stay in both places. Everything else is complete in three languages, both themes, and from 320px up, with nothing above the footer changed by a single pixel.
